

PEEL N STICK® Brass

1 800 346-1995

**Seals to stop
Air Infiltration
For Doors &
Windows**

**KEL-EEZ® products
have been used in and
designated for use in
Historic Preservation**

PEEL N STICK Brass seal requires no tacks, nails or screws to install. The seal cuts easily with a large scissors and fastens permanently to wood, metal, composite or coated (painted) surface. The PEEL N STICK® Adhesive has low temperature tack. The bond strength between the weatherstripping and the attaching surface builds with time. Normally you may open the door in about 20 minutes.

Why is this the best weatherstripping? The brass insert is highly tempered. The tempering makes the brass insert into a spring. This spring always presses against the door or window sash. Thus as the door or window sash expand, contract or move (no matter what the temperature) due to moisture or wind there is always positive seal to help stop air infiltration. No other weather stripping does as well under all weather conditions. Remember rubber or plastics take a set as the temperature drops and if the closure (door or window sash) starts to move the seal will leak.

KEL-EEZ® is the owner of the patent for the "tilt in window for easy cleaning". We replace old double hung windows with our vinyl Thermobarriers™ double hung window. We have found the Brass PEEL N STICK® seal in windows that were over 40 years old and still functioning.
